

Each year more than 200,000 people
are hospitalized from flu.

EVERYONE 6 months of age and
older should be immunized.

**Don't let the flu interrupt
your time together.**

A flu vaccine reduces your risk of illness,
hospitalization, or even death and can
prevent you from spreading the
virus to your loved ones.

Protect your family from flu:
get vaccinated.

The CDC recommends that
everyone 6 months of age
and older get vaccinated
against the flu.

Call your physician
or health plan to
find out which
vaccinations
are right
for you.
